Replacing the handset stops all audio automatically.

PLACING A CALL

Lift the handset. Dial the three-digit extension. For the operator, dial 0 alone.

IN CASE OF DIFFICULTY

If a service does not answer, replace the handset and try again. If no dial tone is heard, verify the terminal adapter is powered and the cable is seated.

BILLING & SERVICE

InfoLine™ is billed at \$12.00/mo. on your C&P Telephone® statement. Flat-rate, unlimited calls. To add or cancel: (202) 555-0100.

The C&P Telephone InfoLine™ service grew out of a question that telephone engineers seldom ask: what if the network itself had something to say?

Since the earliest days of the Bell System, the telephone has functioned as a conduit: a wire between two people. The party at either end provides the content; the network provides only the connection. This service is an experiment in making the network itself a destination.

The information services are developed and staffed under a research agreement between C&P Telephone and the University of Maryland College of Information Studies. When you dial an information extension, you are connected, through the C&P switching network, to a consultant with genuine expertise in their subject. They are not reading from a script. They are prepared to discuss, to recommend, to follow the direction of your curiosity.

The radio service is a network engineering experiment. Nineteen stations from across the United States and Canada are received at the C&P central office via dedicated data circuits and made available to subscribers over standard telephone lines. The audio quality is limited by the bandwidth of the local loop (roughly 3.4 kHz), but the selection is extraordinary: college radio from MIT, freeform broadcasting from Jersey City, public radio from half a dozen cities, and community stations you would otherwise never hear.

For subscribers with compatible audio equipment, a high-fidelity mode bypasses the telephone network entirely and delivers the station's original broadcast stream to your room speakers at full quality. Press 7 while listening to any station.

*“The telephone has been engineered
as a conduit. It should be
engineered as a destination.”*

— Internal C&P memorandum, 1953

C&P Telephone®

A Bell Atlantic™ Company

InfoLine™

Information & Program Service

Subscriber Guide

A premium dial-in service offering live reference assistance, specialist consultations, and radio programming from nineteen stations across North America.

Developed in cooperation with
University of Maryland
College of Information Studies

Monthly service charge: \$12.00
Billed to your regular C&P Telephone® account.

Washington, D.C.

0 The Operator

Your switchboard attendant. She answers general questions, describes any service on the network, recommends a radio station to match your mood, and connects your call to the appropriate extension. If you are unsure where to begin, dial zero. The operator is familiar with every department and can advise on which specialist would best suit your inquiry.

SPECIALIST CONSULTANTS · EXTENSIONS 200–205

Staffed in cooperation with the University of Maryland College of Information Studies. Each consultant maintains genuine expertise in their field.

200 The Chef

A home cooking consultant with a deep love of technique. Passionate but never pretentious. She would rather teach you why a dry pan browns better than hand you a recipe. Vegetarian, conversant in Salt, Fat, Acid, Heat. Describe your kitchen and she will suggest what to make.

201 Fun Facts & Stories

An enthusiastic generalist who picks a subject and makes it fascinating. History, natural science, linguistics, urban infrastructure, peculiar animals. He begins talking the moment you connect. No preamble. Say the word and he changes topics entirely.

202 The Librarian

A reference specialist with genuine taste and strong opinions. She discusses books as serious readers do: what the prose accomplishes, why a particular translation matters. Literary fiction, philosophy, essays, poetry, narrative nonfiction. If you need a specific title or source, she will find it.

203 French Conversation

A patient native speaker from Montréal who conducts conversation in Québécois French. She code-switches between French and English, corrects gently, and adjusts her pace to your level. Not a structured lesson, but a conversation with someone who does not mind repeating herself. Vocabulary from daily life in Québec: dépanneur, fin de semaine, the works.

204 The Daily Briefing

A two-minute morning news summary. Weather in Washington, top stories from the Financial Times, the New York Times, and Bloomberg, and one lighter item at the end. The tone is that of public radio at its best. Begins automatically when you connect.

205 The Music Concierge

An enthusiastic guide with encyclopedic taste and infectious energy. Tell him what you're in the mood for: an artist, a genre, an era, a feeling. He will search the catalog, find something good, and play it through your room speakers. He can also take requests, build a queue, and skip ahead. Designed for long listening sessions.

TEST EXTENSIONS

- 101 Greeting
- 102 Echo test (hear yourself back)
- 103 Keypad test (4 digits)
- 104 Music on hold
- 105 Demonstration

ABOUT THE MUSIC LIBRARY

The InfoLine™ Music Library maintains a collection of recorded selections on compact disc, housed at the C&P central office in an automated retrieval system. Twelve pre-programmed channels (extensions 800 through 811) provide continuous playback in a variety of genres. Extension 730 grants open access to the full catalog. All music library audio plays through the subscriber's room speakers at full quality.

ABOUT THE PROGRAM SERVICE

The InfoLine™ Program Service includes two offerings: nineteen live radio stations received at the C&P central office via dedicated data circuits, and a curated music library of recorded selections accessible through pre-programmed channels.

Radio audio is band-limited to 3.4 kHz by the telephone network. Press 7 while listening to route the station's original broadcast stream to your room speakers at full quality. Music library channels play directly on room speakers.

For a personalized experience, dial 205 for the Music Concierge, who can search the full catalog by artist, genre, or mood and build a listening session to your taste.

Station availability depends on the originating broadcaster and is subject to change without notice. C&P Telephone® is not responsible for interruptions in service caused by the source station.
